### **DETAILED ACTION**

1. This action is in response to the request for reconsideration filed 9/10/2003.
2. Claims 1-2 have been examined and are pending in the application.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Austin U.S Patent No. 5,864,338.

As to claim 1, Austin discloses creating an extension plug (DataSocket extension or plug-in, lines 54-55 column 25) in to interface with API (end-user application programming interface API, lines 51-52 column 6) of an application (graphical program, lines 49-50 column 6), the plug-in communicates with a digital asset management system (a data source or data target, line 25 column 15); creating a floating pallet (data access node, line 24 column 15) for the digital asset management system in the application that uses the properties and behaviors of the application (displayed in the graphical program, lines 17-18 column 15); indicating that a file has been transferred from the digital asset management system to the application (acquire data from the data source and provide the data to the other nodes in the graphical program, lines 34-35

Art Unit: 2126

column 6). Austin does not explicitly teach a plurality of applications. However, Austin (lines 49-62 column 21) discusses the concept of a stand-alone DataSocket that provides data to multiple applications concurrently. It would have been obvious to consider this teaching as a single extension plug-in interfacing with a plurality of different applications because this simplifies network programming as disclosed by Austin (lines 49-62 column 21).

As to claim 2, Austin as modified further discloses using the floating pallet to request a search of digital assets (80 and 82, Fig. 5) using user entered search criteria (510, Fig. 6); transferring the search criteria (84, Fig. 5) to the digital asset management system; performing the search (86, Fig. 5); creating, transferring and displaying the results (select data sources from the list, lines 53-54 column 5).

### ***Response to Arguments***

4. Applicant's arguments filed have been fully considered but they are not persuasive.

Applicant argued that Austin does not teach a plug-in communicates with different APIs (Remarks, lines 3-5 page 3). In response, Austin (lines 34-67 column 21) clearly discusses the concept of using a single DataSocket Server to broadcast data to multiple client applications' APIs. The reference meets the limitation as claimed.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
